

Off The Wall

Workshop Technical Requirements:

Due to the nature of this workshop there are some important technical requirements to consider:

The space must have a rigging height of at least 5m and the ceiling must be rigable either with 'I beams', 'scaffold pipes' or other fixed (not swinging) metal structures capable of holding approx 100kg.

One side of the ceiling (the one that meets the wall that we will be dancing on) needs to be fully exposed in order to rig the wall ropes so that they hang against (or very close to) the wall. This wall needs to be clear and preferably flat (although it is possible to work on a wall that has some raised areas. We would need to know this in advance however)

We require floor plans and technical dimensions of the space including structural plans in advance

If you require any further technical information then please contact Jamie directly on +44 (0) 787 674 7613.
